

# SURVEYING SURVEYING SURVEYING

Our team of professionals have an extensive background in surveys for highways and bridges. We offer services which include pre-engineering work such as location of alignment from aerial photos, total station surveying for horizontal control as well as topographic details and precise level work for vertical control. We also provide services in the area of construction layout for roads, bridges, sewer and water projects. Sokkia instruments are used for our Total Station Surveys and Precise Level work. Plans processing to produce Triangulated Irregular Network (TIN's) and Digital Terrain Models (DTM's) from field data is done in SoftDesk and AutoCAD.

- Total Station Surveys for Highways
- Bridge Site Surveys
- Railway Board Plans
- Pipeline Crossing Plans
- Bridge Surveys
